

Your One Stop Shop Insulation Provider

Application: Rafter Insulation

- **125mm Kooltherm K7 Pitch roof boards** applied **Between** the roof rafters
- **Kooltherm K18 Insulated plasterboards** applied **Below** the roof rafters
- U Value Results **0.17, 0.16, 0.15, 0.14, 0.13, 12, 11 & 0.10 W/m²K**
- Calculation Reference: Rafter 125mm Kooltherm K7

Building Regulations ROI

The current back stop U Value for the roof rafters is **0.16 W/m²K**

The preliminary building energy rating BER certificate will determine the U Value required for all new homes and extensive renovations. In most cases the U Values required are typically lower than the backstops.

- The lower the U Value the slower the heat loss
- The slower the heat loss the greater the savings

The insulation layer is simply the most important building material to consider when looking to achieve the best energy efficiency rating for your home. If the insulation layer is not fitted correctly it will fail. If the insulation fails, there will be no energy efficiency. The BER result does not take into account badly fitted insulation materials.

Application: Rafter Insulation

- **125mm Kooltherm K7 Pitch roof boards** applied **Between** the roof rafters
- **37.5mm Kooltherm K18 Insulated plasterboards** applied **Below** the roof rafters

U-Value Calculation Method: I.S. EN ISO 6946 **U-Value Result 0.17 W/m²K**

Layer	d (mm)	λ layer	λ bridge	Fraction	R layer	R bridge	Description

Simple Insulation Solutions - Rafter Insulation

- **125mm Kingspan K7 Pitch roof boards** applied **Between** the roof rafters
- **Kingspan K18 Insulated plasterboards** applied **Below** the roof Rafters

Before we can provide a solution we need to know the following

Note:

When applying foil faced rigid insulation boards a 25mm airspace space between the top side of the insulation layer and the breathable membrane is recommended by most manufacturers.

Question 1

Are you applying a breathable or non-breathable roofing membrane? Breathable is the best option. If the answer is non-breathable there will be less insulation space available.

Question 2

What is the depth of the roof rafters? Are they 125mm, 150mm, 180mm or 225mm?
The answer to this question will determine the insulation space available.

Question 3

What is the spacing/centers between the roof rafters? Are they 300mm, 400mm or 600mm centres?
The answer to this question will determine the bridging factor.

Question 4

Are you applying an airtight/vapour control membrane below the roof rafters?
Yes, is the best option, airtightness reduces heat loss.

Question 5

What U value would you like to achieve? Example: 0.16 Good 0.14 Better 0.12 Best

Note: For the purpose of the U Value calculations the air layer (air space) between the breathable roofing membrane and the insulation layer is calculated as a ventilated space. The airspace can only be described as an unventilated air layer where the breathable roofing membrane is fully taped and sealed (**not common practice**).

Where a non-breathable (slaters felt) is applied above the roof rafters you must maintain a minimum **50mm fully ventilated airspace (cross flow)** between the slaters felt and the top side of the insulation layer. The purpose of the ventilated airspace is to reduce the risk of condensation and damage to the roof rafters. A 50mm still airspace is not sufficient.

Best Practice:

Applying additional insulation directly below the roof rafters will reduce the risk of thermal bridging.

Note:

- The slate or roof tile will not affect the U Value result.
- The roof tile battens will not affect the U Value result.

Timber roof rafters are natural building materials and will continue to expand and contract over the entire lifetime of the building. Small gaps between the insulation layers and the sides of the roof rafters can considerably reduce the overall thermal performance of the roof. Cold air must not be permitted to circulate on the warm side (inside) of the insulation materials applied between the roof rafters.

Insulation & Associated Building Materials Available from U Value Insulation

Phenolic Foam, foil faced rigid insulation boards

- 125mm Kingspan Kooltherm K7 Pitch roof boards

PIR Insulated plasterboards

- 37.5mm Kingspan Kooltherm K18 Insulated plasterboard
- 42.5mm Kingspan Kooltherm K18 Insulated plasterboard
- 52.5mm Kingspan Kooltherm K18 Insulated plasterboard
- 62.5mm Kingspan Kooltherm K18 Insulated plasterboard
- 72.5mm Kingspan Kooltherm K18 Insulated plasterboard
- 82.5mm Kingspan Kooltherm K18 Insulated plasterboard
- 92.5mm Kingspan Kooltherm K18 Insulated plasterboard
- 102.5mm Kingspan Kooltherm K18 Insulated plasterboard
- 112.5mm Kingspan Kooltherm K18 Insulated plasterboard

- ✓ High performance breathable roof membrane
