

*Open up to a
world of comfort...*

...for your family,

...for your

Natural Beginnings

Sheep Wool Insulation is a new innovative partnership between nature and technology to produce the best performing and safest building insulation available.

For Millennia, sheep have been able to adapt to their many environments as their wool protects them through hot, cold, dry and wet seasons.

Wool used as building insulation retains these properties to create a safe, healthy and environmentally friendly alternative.

Material Advantages

- Produced using 100% pure new sheep's wool, a sustainable and renewable resource
- Thoroughly washed, treated and needle stitched to the highest standards
- Wool is breathable; it can absorb and release moisture without reducing its performance
- Follows the shape of the rafters, studs and joists for a permanently tight fit

- Multiple layered wool fibres considerably reduce airborne sound transmission
- Safe to handle means low construction costs and hazard free installation
- Wool does not support combustion and will extinguish itself in the event of fire
- Technically certified products with online advice and telephone helpline service
- Long lifetime, environmentally safe, re-usable and biodegradable material

Energy Saving & Safe to Use

Wool is designed by nature to save energy. Sheep Wool Insulation also requires only a fraction of the energy to produce compared to that of man made counterparts. This means that Sheep Wool Insulation will pay back it's manufacturing energy cost more than five times sooner.

Sheep Wool Insulation is perfectly safe to touch and requires no specialised safety clothing or equipment to fit. It causes no irritation to the eyes or skin and wool fibres present no hazard to your health.

A Lifetimes Performance

Once installed, wool can absorb and release moisture without reducing it's thermal performance. This makes Sheep Wool Insulation particularly suitable for use in breathable construction situations.

Wool has a higher fire resistance than cellulose and cellular plastic insulation materials. It does not burn, but instead sings away from fire and extinguishes itself.

home,

...for your environment.

Evolving Product Range

Sheep Wool Insulation features an ever growing product range to suit a wide variety of thermal and acoustic applications.

Thermal / Acoustic Insulation Rolls

- Suitable for use throughout your building
- Available in popular width dimensions
- Manufactured to a variety of depths (can be layered to achieve requirements)
- Certified as the highest performing fibrous insulation, maximising energy efficiency
- Loose fill, log home insulation, cutting tools, membranes & tapes also available

SilentWool Acoustic Underlay Products

- SW-Joist strips for use on floor joists
- SW-Floor rolls for use under laminate, solid, semi-solid & parquet floors
- SW-Carpet finest quality carpet underlay

Technically Superior

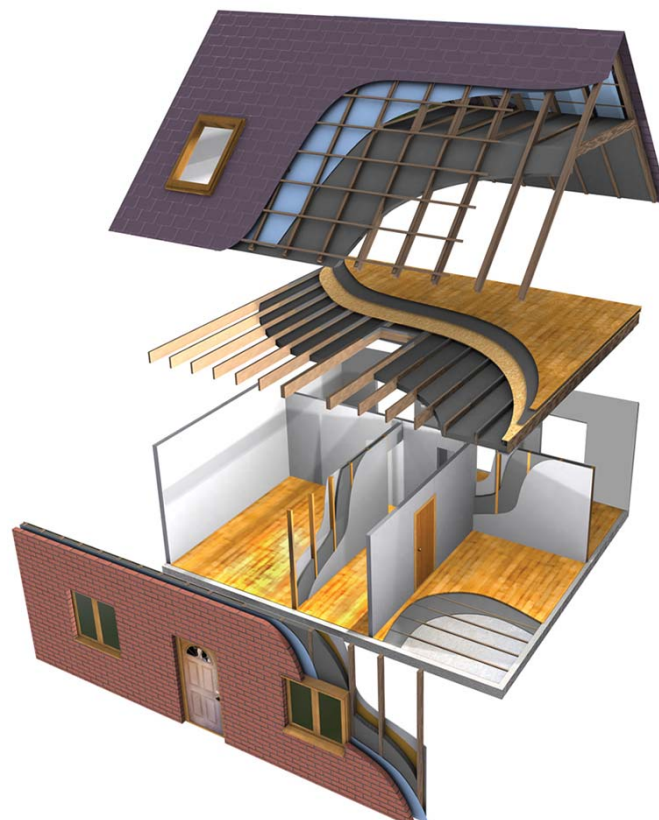

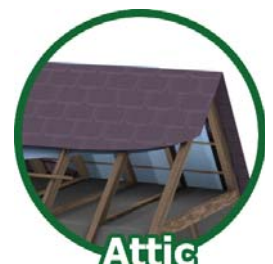

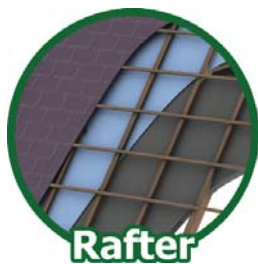

Full testing and certification is carried out on all our products to ensure compliance with building regulations and to give you the confidence to make the best choice.

Product quality is continuously monitored to ensure the highest award winning standards are always maintained.

Suitable for use throughout your home

Sheep Wool Insulation products can be installed in a variety of locations around your home for both thermal and acoustic insulation purposes. The illustration below shows popular construction types where Sheep Wool Insulation can be used.
