

SP FireStop System

SP FireStop Slab® has been specifically designed to form cavity fire stops within buildings, in both horizontal and vertical applications.

It is a one-piece system enabling easy cutting and installation, and provides a unique lateral compression to facilitate a tight fit.

The SP FireStop Slab® is suitable for cavity widths between 50mm and 400mm.

The SP FireStop Plus Slab® is suitable for cavity widths up to 600mm.

Benefits:

- Tested to BS EN 1366:Part 4 achieving up to 2 hours fire resistance
- Resists the passage of smoke
- Easy to cut and install

This information is a summary of the products' performance and will vary dependent on the application. Please refer to the product datasheets for full details.
