

Thermal Cavity Barriers

Thermal Cavity Barriers - TCB (Thermal Cavity Barrier) and PWCB (Party Wall Cavity Barrier) - have been developed to exceed minimum building regulation requirements for fire resistance within concealed wall cavities.

Tested and assessed for integrity and insulation to BS 476-20 and EN 1366-4:2006+A1 2010.

Benefits:

- Performance is not affected by movement in the building, shrinkage or thermal change
- Durable
- Can be used vertically or horizontally
- Easy to install

In bags within a box on a pallet 1300 x 1200mm. Full pallet quantities only, no mixed pallets
